To Whom It May Concern:

CANTEX PVC electrical conduit fittings are produced in accordance with NEMA TC-3 and/or NEMA TC-9 and/or ASTM F 512 and/or UL 514B. These standards define the properties and dimensions of various fittings intended for use in conjunction with Schedule 40 and Schedule 80 Rigid PVC conduit, or with any of the various grades of EB and DB duct as specified in NEMA Standards TC-6 & 8 and/or standard specification ASTM F 512. PVC Sweeps are produced to meet NEMA Standards TC-6 & 8 and/or standard specification ASTM F 512 along with UL 651.

All CANTEX underground PVC conduit meet NEMA TC-6 & 8 requirements. All CANTEX underground PVC conduit fittings meet NEMA TC-9 requirements along with NEMA TC-3 Requirements.

Our currently posted catalog on CANTEX website can be misinterpreted to imply underground PVC fittings are covered by TC-6 when it should read that they meet NEMA TC-9 requirements along with NEMA TC-3 Requirements.

All items manufactured by CANTEX are made in the United States of America.

Sincerely,

**David Gwinn**
