

PVC Floor Box Leveling Ring Part No. 2006008

The patented CANTEX PVC floor box ring, illustrated below, is designed to fit several other manufacturers' floor boxes as well as the CANTEX floor box. The ring is also designed to fit a number of manufacturers' covers, both 3-hole mounted through the surface of the cover and 2-hole mounted through the electrical device box tabs. Hole patterns "A" and "B" are of slightly different bolt circles, one of which will fit most of the covers on the market. Hole sets 1, 2 and 3 are for mounting the electrical device or the device and the cover together. A green wire pigtail is provided for grounding metal covers.

Below is a chart of known covers which will fit the CANTEX box and/or the CANTEX leveling ring. Other covers may have different mounting patterns.
